
Layer 1 – IoT Edge Holders (multi-domain)
MQTT Sensor
Smart Bulb
IP Camera
ThingSpeak Gateway
Industrial PLC
Compromised device
[Domain A: smart city]
[Domain B: healthcare]
[Domain C: industrial]
did + presentation
challenge
flow
Layer 2 – SSI Authentication Gateway
DID resolver + VC wallet
Trust + status checks
Challenge + binding (ph)
Traffic monitor + RF gate
Policy engine (BBS+, holder key)
resolveDIDs()
isTrusted()
isRevoked()
Layer 3 – Blockchain Verifiable Data Registry
DIDRegistry
TrustAnchor Registry
RevocationList
QBFT consensus (Besu)
bound, short-lived token
Layer 4 – Federated Verifiers / Relying Parties
Smart-city dashboard
Healthcare portal
e-Government portal
Industrial SCADA
Mobile / web apps
cross-domain trust assertion (administered by the verifying domain)
